

What is claimed is:

1. A system for providing event information comprising:

event information obtaining means being capable of obtaining at least one event information in an event place;

request information receiving means for receiving at least one event information which an information user requests to obtain in the event place; and

event information providing means for, in response to a request from the information user received by the request information receiving means, providing one or a plurality of event information among the information obtained by the event information obtaining means to the information user through a signal transmission path.

2. A method for providing event information comprising:

an event information obtaining step of obtaining at least one event information in an event place;

a request information receiving step of receiving at least one event information which an information user requests to obtain in the event place; and

an event information providing step of, in response to a request from the information user received in the request

information receiving step, providing one or a plurality of event information among the information obtained by the event information obtaining means to the information user through a signal transmission path.

3. A system for providing event information comprising:

requested information receiving means for receiving event information which an information user requests to obtain in an event place;

event information obtaining means for, in response to a reception result of the request information receiving means, obtaining event information according to a request from the information user in the event place; and

event information providing means for providing the event information obtained by the event information obtaining means to the information user through a signal transmission path.

4. A method for providing event information comprising:

a request information receiving step of receiving event information which an information user requests to obtain in an event place;

an event information obtaining step of, in response to

a reception result of the request information receiving step, obtaining event information according to a request from the information user in the event place; and

an event information providing step of providing the event information obtained in the event information obtaining step to the information user through a signal transmission path.

5. A system for providing event information comprising:

information acquiring means for acquiring a plurality of information; and

information delivering means for delivering information, which a user selects from among the plurality of information obtained by the information acquiring means, to the user.

6. A system for providing event information comprising:

information acquiring means for acquiring a plurality of information;

desire receiving means for receiving a desire of a user; and

information delivering means for delivering information, which is related to the user's desired selection received by the desire receiving means, to the user.

7. The system for providing event information according to Claim 6, wherein the information includes information acquired on the basis of the desire received from the user before the opening of an event and information acquired on the basis of the judgment of a content provider.

8. The system for providing event information according to Claim 6, further comprising user desire acquiring means for receiving a desire of acquisition from the user before the opening of an event.

9. The system for providing event information according to Claim 6, further comprising disclosure information selecting means being capable of selecting information the user desires disclose.

10. The system for providing event information according to Claim 6, wherein the information relates to an event.

11. The system for providing event information according to Claim 6, wherein the information is concerned with medical treatments.

12. The system for providing event information according to Claim 7, wherein the event relates to a lecture meeting, an academic meeting, or an exposition.

13. A method for providing event information comprising:

an information acquiring step of acquiring a plurality of information; and

an information delivering step of delivering information, which a user selects from among the plurality of information acquired in the information acquiring step, to the user.

14. A method for providing event information comprising:

an information acquiring step of acquiring a plurality of information;

a desire receiving step of receiving a desire of a user; and

an information delivering step of delivering information, which is related to the user's desired selection received in the desire receiving step, to the user.

15. The event information providing method according to Claim 14, wherein the information includes information

acquired on the basis of the desire received from the user before the opening of an event and information acquired on the basis of the judgment of a content provider.

16. The event information providing method according to Claim 14, further comprising a user desire acquiring step of receiving a desire of acquisition from the user before the opening of an event.

17. The event information providing method according to Claim 14, further comprising a disclosure information selecting step being capable of selecting information which the user desires to disclose.

18. The event information providing method according to claim 14, wherein the information relates to an event.

19. The event information providing method according to Claim 14, wherein the information is concerned with medical treatments.

20. The event information providing method according to Claim 15, wherein the event relates to a lecture meeting, an academic meeting, or an exposition.
